

# Marketplace: Dabbe me Dabba

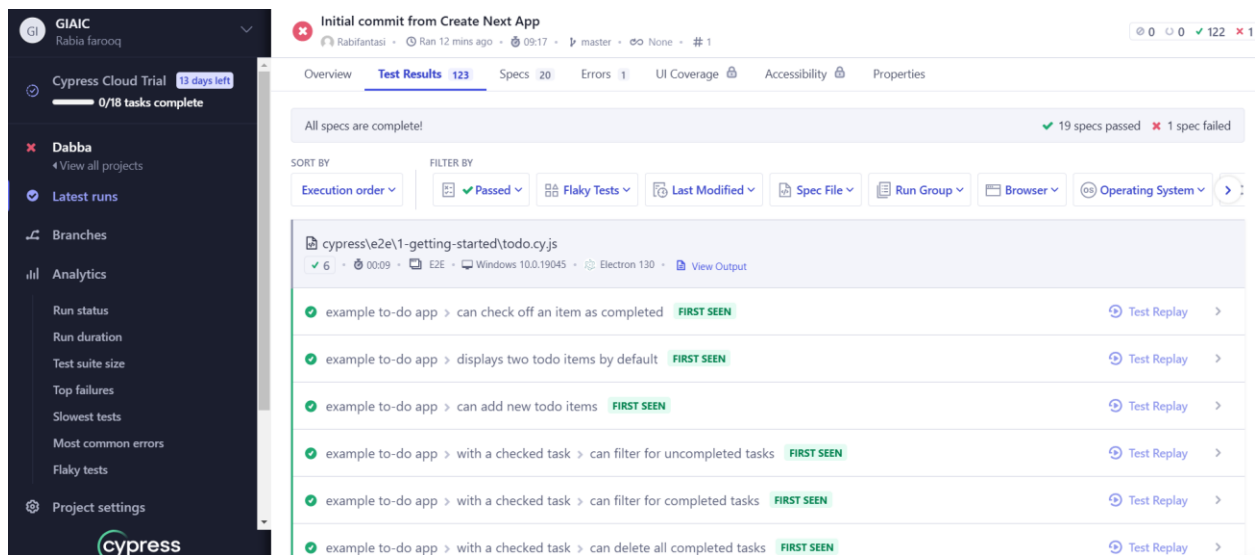

## Hackathon 3: Day 5

### Testing\_Error\_Handling\_and\_Backend\_Integration\_Refinement

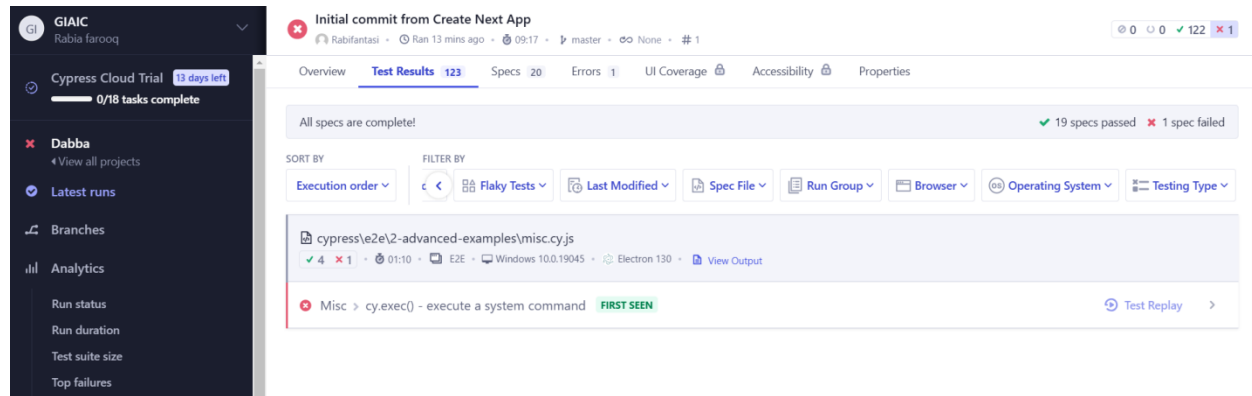

#### 1. Cyprus Testing: For end-to-end testing.

I run a Cyprus test. It almost took 10 min in which 19 aspects are passed and 1 is failed

#### Cyprus Passed Screenshot:

### Cyprus Failed Screenshot:

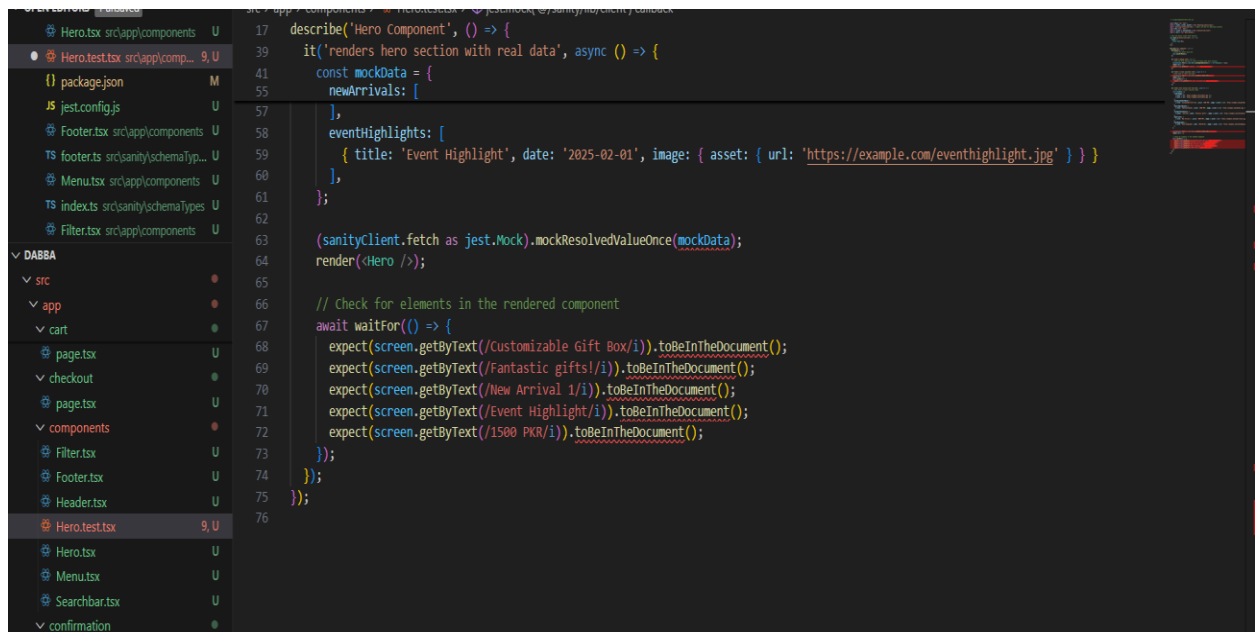

### Cyprus Testing Report (CSV Format):

[illegible]

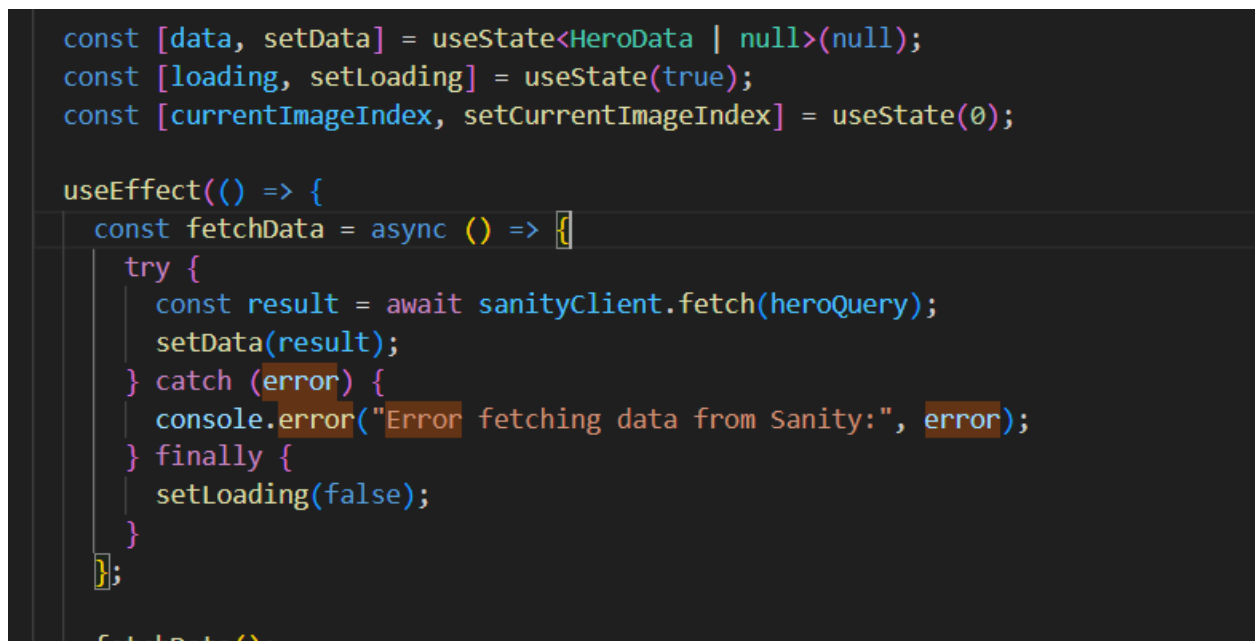

## 2. React Testing Library: For component behavior testing.

I have tried many time but I am not able to solve the issue and errors in the code: I was looking the hero component test

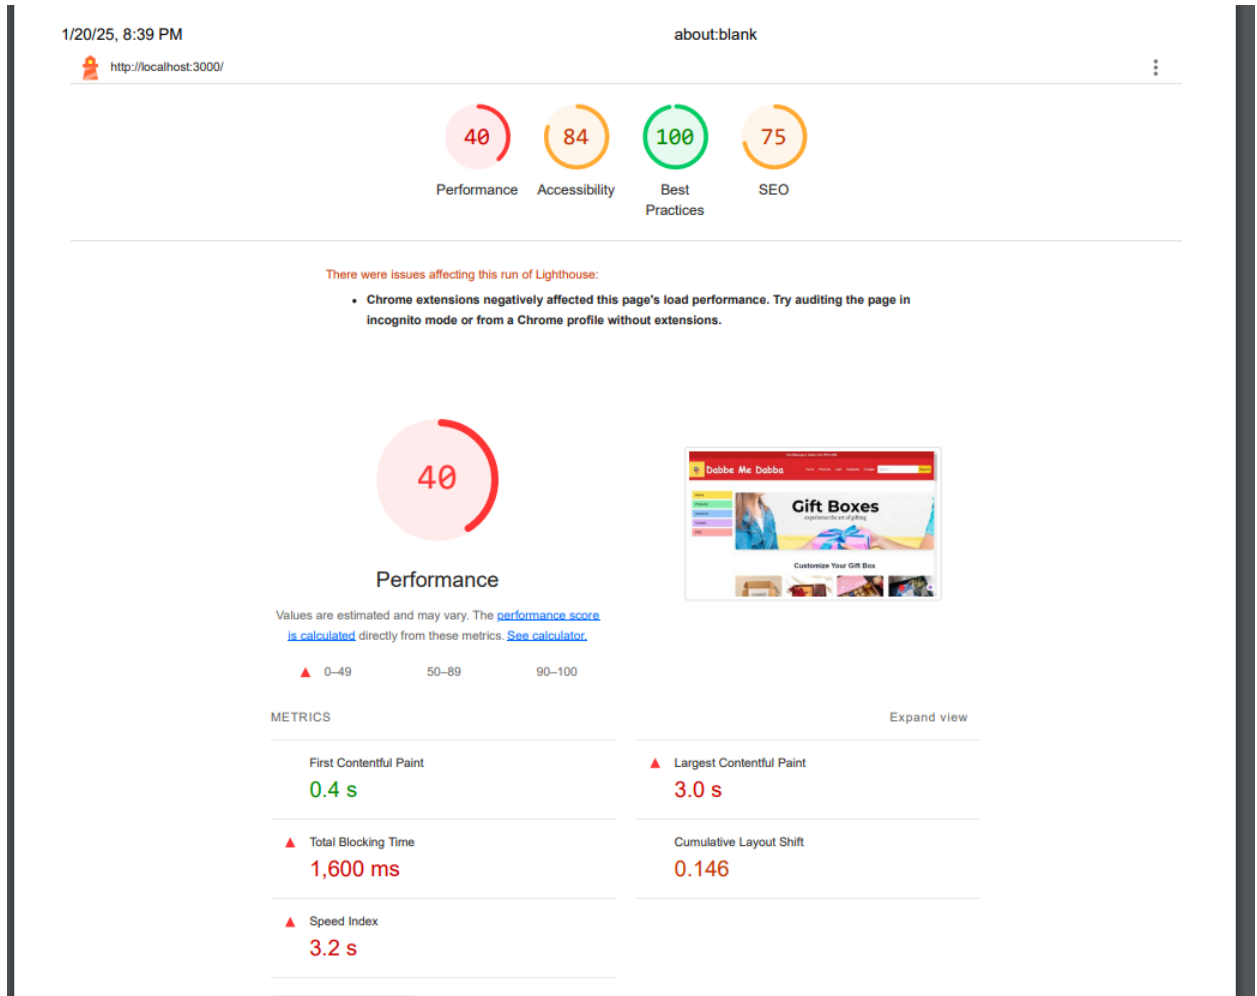

### 3. Error Handling

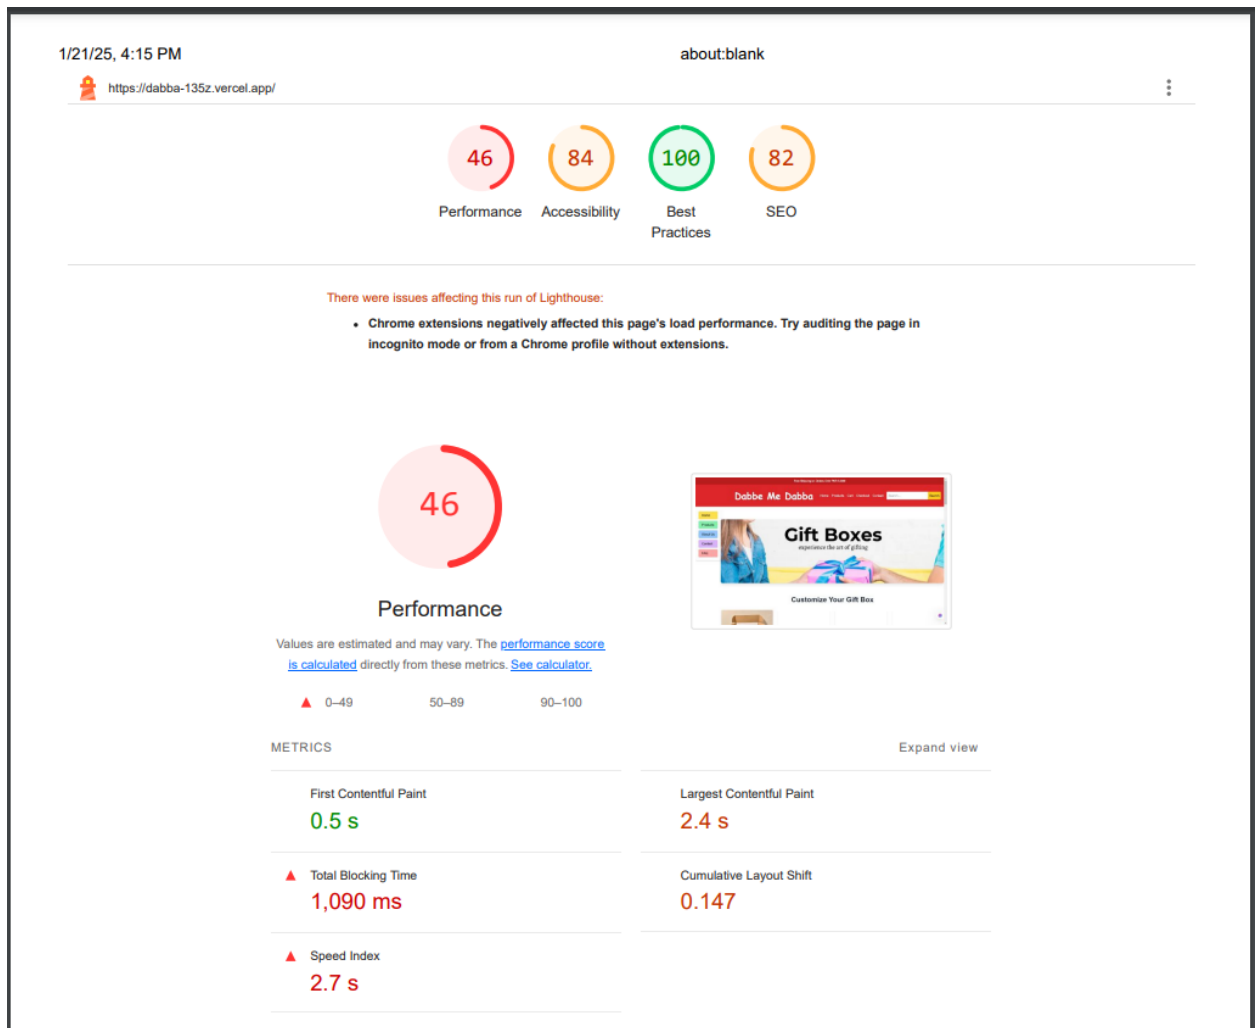

I have added the try and catch method on many places to handle the error and also show the line where needed

## 4. Lighthouse Test: (Identify performance issues, accessibility concerns, and best practices)

After making all the changes I got this result

After all the testing and adjustments, Dabbe Me Dabba is stronger and more reliable. Every little improvement feels like a win!
